

Java

```
class Solution {  
    public int[] sameEndSubstringCount(String s, int[][] queries) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {string} s  
 * @param {number[][]} queries  
 * @return {number[]}  
 */  
var sameEndSubstringCount = function(s, queries) {  
  
};
```

TypeScript

```
function sameEndSubstringCount(s: string, queries: number[][]): number[] {  
  
};
```

C++

```
class Solution {
```

```
public:
    vector<int> sameEndSubstringCount(string s, vector<vector<int>>& queries) {

    }
};
```

C#

```
public class Solution {
    public int[] SameEndSubstringCount(string s, int[][] queries) {

    }
}
```

Kotlin

```
class Solution {
    fun sameEndSubstringCount(s: String, queries: Array<IntArray>): IntArray {

    }
}
```

Go

```
func sameEndSubstringCount(s string, queries [][]int) []int {

}
```
